Education

Wilfrid Laurier University

Bachelor of Science in Computer Science | Big Data Concentration

Expected: April 2027

Waterloo, Ontario

- Relevant Courses: Data Structures, Databases I, Object-Oriented Programming, Software Design, Circuits, Discrete Math

Experience

Research Assistant

University of California Merced

Jan 2026 – Apr 2026

Waterloo, Ontario

- Accelerated **ML** experimentation timelines by **30%** by developing automated **Python** data pipelines that transformed transportation datasets into model-ready inputs for deep learning, LLM, and prediction workflows.
- Consolidated **10+** transportation datasets from public **APIs**, web-based sources, and **PostgreSQL** databases into a unified data foundation, enabling exploratory data analysis, feature evaluation, and experimentation across machine learning workflows.
- Improved downstream model data quality by **25%** by cleaning, validating, and preprocessing **500K+** records with **Pandas** and **NumPy**, applying standardization, imputation, deduplication, and consistency checks to create reliable inputs for ML pipelines.
- Improved research workflow efficiency by **20%** by building reusable preprocessing and feature **engineering pipelines** for continuous model evaluation across transportation prediction experiments.

Software Engineering Intern

Jain Consultants

May 2025 – Aug 2025

Toronto, Ontario

- Built a **custom internal tool** for engineering specification documents, enabling **12 engineers** to save **60+ hours** weekly.
- Decreased data input errors by **50%** by building structured **data transformation pipelines** using **Pandas** and **NumPy**.
- Reduced deployment errors by **10%** by writing unit tests for **backend automation** scripts and enforcing **edge-case** validation
- Shortened environment setup time by **40%** by containerizing internal tools with **Docker** and documenting reproducible configurations for deployment-ready engineering workflows.

Software Engineering Intern

OneDrug

Jan 2024 – Apr 2024

Toronto, Ontario

- Built real-time filtering for **1,200+** providers using **React** and **GraphQL** significantly improving UI response time.
- Automated **SQL** sync and backend workflows with **Node.js** and **MongoDB**, saving 30+ hours/month and improving reliability.
- Built scalable **backend APIs** using **Node.js** and **MongoDB** handling **5,000+** search queries, cutting user wait time by **40%**.
- Implemented secure **REST APIs** with input validation and role-based access controls, reducing invalid requests by **25%**.

Software Engineering Intern

Accumine Technologies

Jun 2023 – Aug 2023

London, Ontario

- Containerized **20%** of legacy projects using **Docker**, reducing setup time and **standardizing environments** across the team.
- Improved signal analysis accuracy by **15%** by developing **MATLAB** scripts to validate analog oscilloscope data.
- Improved internal testing efficiency by **20%** by developing MATLAB simulation scripts that modeled system behavior, validated outputs, and supported faster debugging of technical workflows.

Projects

Amplify - UofTHacks Finalist | Next.js, React, Tailwind CSS, Gemini, Amplitude

- Profiled **5** behavioral traits in real time using **Next.js** and **Gemini**, enabling adaptive Shopify storefront personalization.
- Triggered dynamic UI changes at **80%** confidence with **React** context and **Tailwind CSS**, increasing relevance for buyer intent.
- Rendered live behavioral radar charts using **Framer Motion** and **SVG**, improving transparency of AI-driven decisions.
- Processed **live shopper** events (**200 ms**) via **Amplitude** analytics and a **TypeScript** event bus, allowing instant inference.

Cortex - HackCanada Top 8 | React, Next.js, TypeScript, Three.js, FastAPI, Python, Gemini, AWS

- Built Cortex, a **full-stack** GenAI system that ingests GitHub repositories, PDFs, and raw text, then applies **LLM** classification and evaluation across **51** computer science categories using **FastAPI** and **Gemini**.
- Engineered profile aggregation workflow using **EMA-based** weighting, prioritizing sources like GitHub over text submissions.
- Developed an interactive **Next.js** and **Three.js** frontend that mapped skill categories into animated brain regions.
- Integrated a chatbot that generated **SWOT** analyses, learning paths, and skill-gap insights from each user's profile data.

Technical Skills

Languages: Python, GO, Bash, SQL, JavaScript, TypeScript, Java, C, C++

Developer Tools: Linux, Git, GitHub, AWS, Azure, Docker, Kubernetes, CI/CD, Agile, SDLC, VS Code, IntelliJ, JUnit

Technologies/Frameworks: REST APIs, FastAPI, Node.js, MySQL, MongoDB, React, Spring Boot
